SKILLS

HTML	Git
CSS	Yup
SASS	Firebase
Scratch	Material UI
Javasicrpt	REST API
TypeScript	Styled-Compo...
React	Figma
Next.js	Npx/Npm
Router	Yarn
Redux	Team player
Toolkit	Goal-oriented
RTK-Query	Quick learner
Axios	Reliable
Formik	Positive attitude
Bootstrap	Flexibility

EDUCATION

КГТУ им. И.Раззакова

01.09.2023 - Present

Information security of automated systems

PEAKSOFT HOUSE

01.07.2022 - 31.03.2023

Frontend
HTML , CSS , JavaScript , React

WORK EXPERIENCE

FRONTEND MENTOR

Peaksoft House and Peaksoft Kids | 01.04.2023 - Present

- I taught students various tools, including HTML, CSS, JavaScript, React, and many others.
- Actively participated in projects and debugged code written by other developers.
- Provided feedback and support to students for the development of programming skills.
- Created and maintained an interactive learning environment.
- Collaborated with colleagues to enhance educational programs and materials.

FRONTEND DEVELOPER INTERN

Peaksoft House | 01.01.2023 - 31.03.2023

I was involved in the development of a project called "Gadgetarium". Our team consisted of backend specialists, a designer, and a project manager. We worked together on this project, holding meetings three times a week to allocate tasks and discuss any arising issues, among other things.

As needed, I led the frontend team, ensuring the efficient execution of tasks. I really enjoyed working on this project, dedicating a lot of time and effort to it. Thanks to the quick and effective completion of tasks, my colleagues decided to include me in another project called "MedCheck".
I simultaneously handled tasks for both projects, "Gadgetarium" and "MedCheck".
As a result, we formed close connections with both members of our team and the backend team.

PROJECTS

We applied the Agile philosophy in our projects, including conducting Stand-up meetings, managing tasks through the ClickUp website, and collaborating with Java developers , PM and designers.

In my projects, I created responsive designs, integrated payment systems, developed reusable tables and UI components, worked on order processing and favorites functionality, integrated maps, and created typical pages such as "About Us" and "Contacts" and so on.

That I used: react , axios , mui , redux , formik , rtk-query , react-table , toastify , react-dropzone, data-picker and so on.

My main project was Gadgetarium but I was quickly completing my tasks and I was invited to join the MedCheck project and I was involved in two projects at the same time.

1 Gadgetarium - online store where users can buy gadgets.

2 MedCheck - is a website to provide information on the clinic's medical services and to facilitate the process of recording patients.

3 Peaksoft House - this is a website where you can find information about the company, its mission, and values. Additionally, you can register for courses offered by the company.

In the Peaksoft House project, I focused on rectifying errors, introducing new features, and implementing various enhancements. My aim was to enhance functionality and ensure a more efficient website operation.
This project was developed using Next.js.

And many other projects you can see in GitHub

CERTIFICATES

1) Graduate of the programming
course Peaksoft House

2) Participation in hackathon
"Let'sGoDigital 2.0".

3) Participation in hackathon
"Let'sGoDigital 3.0".
